Trimming your ear mould tubing

You will find it much easier to get somebody to help you with this.

First insert the ear mould and place the hearing aid behind the ear.

With your thumb and forefinger position your nail at the point you want to cut and pinch the tubing.

Remove the ear mould.

Trimming Earmould Tubing	Latest review date: Apr-2024	Version number: 1.4

Cut the tubing with scissors. Be cautious and trim the tube a bit longer, you can always cut a little more off.

Attach the trimmed tubing to the ear mould and try for size.

If the tubing is too short the hearing aid will not sit well behind the ear. Too long and there will be a gap at the top of the ear.

If you have any problems call Audiology. Tel: 01392 402223
